BizTrack

Modern Business & Point-of-Sale Management System

USER MANUAL

How to Use BizTrack to Run Your Business Day to Day

October 2026 Edition

Prepared for BizTrack business owners and users

About This Manual

BizTrack helps you run your whole business from one place — sales, purchases, stock, expenses, customers, staff, SMS and reports — for a single store or many.

This manual is written for everyday users: the owner, a manager, a cashier or an accountant. It explains each screen step by step, using the same names you see on the screen. It does not cover technical operation (servers, databases, code).

How to read the boxes

NOTE	Useful information to remember.
WARNING	Something that can cause data loss or mistakes — read carefully.
TIP	A faster or better way of doing things.

What's New in This Edition

This edition matches the current version of BizTrack and adds:

- **SMS Messaging** (Chapter 8): send messages, manage contacts, groups and templates, and check your SMS balance.
- **Account & Top-up**: see your SMS balance, pay directly where available, or send a top-up request to the support team.
- **Customer and product search** now finds every record instantly — including when scanning barcodes.
- **Net Profit Report** and **Day Report**, plus new Purchase Trends and Stock Movement reports (Chapter 7).
- **Session Lock**: your session locks after inactivity and unlocks with your password (section 1.8).
- **Debit reminders by SMS or WhatsApp** (section 4.6).
- **Database Health Check** and improved Activity Logs under Tools (section 11.7).
- **Preferred Language** in your profile, and this **User Manual** downloadable inside the system in English and Swahili.
- Corrections throughout: password rules, product form fields, stock adjustment reasons, menu names, and security options.

CHAPTER 1

1 Getting Started with BizTrack

1.1 What is BizTrack?

BizTrack is a digital system for managing your business — sales, purchases, stock, customers, suppliers, staff, and finances — for a single store or several stores at once. This manual walks you through how to use every part of the system from the user interface, step by step.

This manual does not cover technical operation of the system (servers, databases, code) — it is written for a regular business user: the owner, a manager, a sales cashier, or an accountant.

1.2 Logging In

Every user has their own account with an email address and password.

1. Open BizTrack in your browser (or the mobile/desktop app you've been set up with).
2. Enter the email address you registered with.
3. Enter your password.
4. Click **Login**.

> **NOTE**
> If you were given an account by your store administrator, use the email and password they provided. You can change it later under My Profile → Change Password.

1.3 Registering a New Account (For New Business Owners)

1. On the login page, click **Register here**.
2. Fill in the required details: your name, email, password, and your business information.
3. Click **Register**.
4. Check your email to verify your account (also check your spam folder).
5. Once verified, log in using the email and password you set.

1.4 Forgot Password

1. On the login page, click **Forgot password?**.
2. Enter the email address registered to your account.
3. Open the email you receive and click the reset-password link.
4. Enter a new password and confirm it. A new password must be **at least 6 characters** and contain **at least one number** and **at least one special character** (`! @ # $ % & ? *`).

> **NOTE**
> When you change your password later from **My Profile** → **Change Password**, the new password must be at least 8 characters long.

1.5 The Dashboard — Your Business at a Glance

As soon as you log in you land on the Dashboard — a page that gives you a quick overview of how your business is doing: today's sales, top-selling products, stock alerts, and other key figures.

- Today's Sales — total invoices and revenue for the day.
- Top Products — best-selling products for the selected period.
- Stock Alerts — products running low or completely out of stock.
- Recent Purchase Orders and Top Suppliers.

> **NOTE**
> If your role does not have permission to view the full Dashboard statistics, you'll see a limited version with shortcuts to only the areas you're allowed to use. Contact your store administrator if you need broader access.

1.6 Understanding the Main Menu (Sidebar)

On the left side of the screen (or at the top, on mobile) is the main menu that takes you to every part of the system: **Dashboard**, **Sales**, **Purchases**, **Inventory**, **Categories**, **Reports**, **Expenses**, **Users**, **Stores**, **Messaging**, **Settings**, **Subscription**, **BizTrack AI**, and **User Manual**. What you see depends on the permissions your administrator has assigned you — you won't see sections you aren't allowed to use.

- On desktop: click the arrow icon above the menu to collapse/expand the menu labels.
- On mobile: tap the menu icon (≡) at the top left to open the menu as a slide-out drawer.
- Many sections open a second row of tabs (for example **Sales** → **Invoice**, **Pending Orders**, **Sales History**) that you use to move between the pages of that section.

1.7 Selecting a Store (For Businesses with Multiple Stores)

If your business has more than one store (multi-store), you'll see a store selector above the main menu. All the data you see — products, sales, reports — belongs to the currently selected store.

1. Click the name of the currently selected store at the top of the menu.
2. Choose a different store from the list.
3. The system will load the data for the newly selected store.

> **WARNING**
> Make sure you're working in the correct store before recording sales, purchases, or stock adjustments — each store keeps its own separate stock and records.

1.8 Session Lock (Inactivity)

To protect your business data, BizTrack automatically **locks your session** when you have been inactive for a while (the time limit is set by your administrator under Settings → Security). You are not logged out — the screen simply shows **Session Locked**.

1. Enter your password on the lock screen.
2. Click **Unlock** to return to exactly the page you were working on.

> **NOTE**
> If you leave your computer or phone, lock-out protects your sales and stock records from anyone passing by. You can also log out completely from the profile menu at the top right.

2 CHAPTER 2 Products & Categories

Before you can start selling, you first need to add your products to the system. This is done under **Inventory** → **Products**, and **Categories**.

2.1 Adding a New Product

PATH **Inventory › Products › New Product**

PERMISSION `view_products / create_products`

1. Go to **Inventory** → **Products**.
2. Click **New Product**.
3. Fill in the **Product Name**.
4. Select the **Unit** (e.g. Piece, Kilogram, Box, Crate, Litre).
5. Select the **Product Category** (if it doesn't exist yet, create it first under **Categories** — see section 2.3).
6. Enter the **Barcode** — type it yourself or click the barcode icon to scan the product's real barcode with the camera.
7. Enter the **Current Stock** on hand (the opening stock).
8. Enter the **Alert Quantity**: the system will warn you whenever stock falls to or below this number.
9. Choose the **Status**: Active (can be sold) or Inactive (hidden from selling).
10. If expiry tracking is enabled in Settings, fill in the **Manufactured Date** and **Expiry Date**.
11. Add a **Product Description** and upload an **Image** (both optional).
12. Click **Save Product**.

> **NOTE**
> The barcode must be unique — two products cannot share the same barcode. Prices are **not** entered on the product form: after saving the product, set its cost price and selling price under **Inventory** → **Price List** (see section 2.5). The cost price is also updated whenever you receive goods (see section 5.3).

2.2 Editing or Deleting a Product

1. Go to **Inventory** → **Products**.
2. Search for the product by name or barcode.
3. Use the row actions to open **Edit Product** (to change its details) or to delete the product.

> **WARNING**
> Deleting a product cannot be undone. If a product has sales or purchase history, it is safer to edit it and set its **Status** to Inactive instead of deleting it.

2.3 Product Categories

PATH Categories › Product Categories

Categories help you group products (e.g. Beverages, Building Materials, Clothing) to make searching easier and to break down reports by category.

1. Go to **Categories** → **Product Categories**.
2. Click **Create Product Categories**.
3. Enter a category name and description (optional).
4. Click **Save**.

2.4 Price Categories

PATH Categories › Price Categories

If your store uses different prices for different customer segments (e.g. Retail Price and Wholesale Price), use **Price Categories**. This feature must first be enabled in Settings under **Multi-Price Support**.

1. Go to **Categories** → **Price Categories**.
2. Click **Create Price Categories** and enter a name (e.g. **Wholesale**).
3. Go to **Inventory** → **Price List** to set each product's price for that category.

2.5 Price List

PATH Inventory › Price List

Here you can view and update the prices of all products quickly, without opening each product's form individually.

1. Go to **Inventory** → **Price List**.
2. Search for the product you want to reprice.
3. Click **Edit Price**, enter the new cost and/or selling price.
4. Click **Update Prices**.

> **NOTE**
> You can also export or import prices in bulk via Excel/CSV — see Chapter 3.6.

3 CHAPTER 3 Inventory & Stock

The **Inventory** section gives you full control over your stock — tracking quantities on hand, their value, making adjustments, transferring stock between stores, and performing physical stock counts.

3.1 Viewing Current Stock

PATH **Inventory › Current Stock**

This is a list of all products and the quantity currently on hand, showing products that are well stocked, running low, and completely out of stock.

- In Stock — stock is above the minimum threshold.
- Low Stock — stock has fallen below the minimum level set on the product.
- Out of Stock — stock is zero or below.

3.2 Stock Value

PATH **Inventory › Current Stock Value**

Shows the total value of your stock at cost price — essential for knowing how much capital is tied up in your inventory at any time.

PATH **Inventory › Stock Value History**

Stock Value History is a separate page that records the value of your stock day by day, so you can see how it has grown or shrunk over time.

3.3 Stock Adjustment

PATH **Inventory › Stock Adjustment**

PERMISSION `view_stock_adjustment`

Use this to correct product quantities whenever a discrepancy occurs that isn't the result of normal sales — for example damaged goods, theft, loss, or stock found during a count.

1. Go to **Inventory** → **Stock Adjustment**.
2. Click **Create Adjustment**.
3. Select the product (and batch, if you're using batch-wise tracking).
4. Select the adjustment type: add stock or subtract stock.
5. Enter the quantity to adjust.
6. Select a **Reason**: Expired, Customer Return, Stock Correction, Damaged, Found, Lost, or Other.
7. Add any additional notes if needed.
8. Click **Save**.

> **WARNING**
> Stock cannot go negative unless **Allow Negative Stock** is enabled in Settings.

You can review all past adjustments in the adjustment history on the same page.

3.4 Stock Count

PATH **Inventory › Stock Count › Create Stock Count**

Use this when you carry out a physical stock count in the store, to confirm whether what the system shows matches what's actually on the shelves.

1. Go to **Inventory** → **Stock Count**.
2. Click **Create Stock Count**.
3. For each product, enter the **Counted Stock** (the actual quantity you counted).
4. The system will show the difference between the system count and your physical count (Products with Difference).
5. Click **Save Stock Count** — the system will automatically adjust stock to match your count.

> **NOTE**
> It's good practice to perform a stock count regularly (e.g. monthly) to catch shrinkage early.

3.5 Stock Transfer Between Stores

PATH **Inventory › Stock Transfer › Create Stock Transfer**

This feature is only available if you have more than one store and it's been enabled in Settings (**Allow Inter-Store Transfer**).

1. Go to **Inventory** → **Stock Transfer**.
2. Click **Create Stock Transfer**.
3. Select the **Source Store** (where stock is coming from) and the **Destination Store** (where it's going).
4. Add the products and the quantity to transfer for each one.
5. Click **Create Transfer**.
6. A user with the right permission can then approve the transfer (**Approve Transfer**).
7. The destination store then receives it via **Receive Transfer**, checking the quantity actually received before confirming.

> **NOTE**
> A transfer can be cancelled (**Cancel Transfer**) before it's approved, or deleted entirely by an authorized user.

3.6 Bulk Import / Export

PATH Inventory › Import / Export

Instead of adding products one by one, you can upload a large list of products, prices, or stock via an Excel (.xlsx) or CSV file.

1. Go to **Inventory** → **Import / Export** (or **Settings** → **Bulk Operations**).
2. Click **Download Template** to get the correct file layout.
3. Fill in your data using that template (Excel or CSV).
4. Back in the system, click **Click to select file** and choose the file you filled in.
5. The system will show a summary of valid and invalid rows before importing.
6. Confirm importing the valid rows (invalid ones can be skipped).

> **NOTE**
> Importing products updates the products that already exist (matched by barcode) and creates the new ones. The barcode is what's used to identify an existing product.

You can also export your product, price, or stock data as Excel or PDF at any time for record-keeping or printing.

4 CHAPTER 4 Sales (POS)

This is where you record actual sales to customers — creating invoices, taking payments, tracking debts, and managing your customers. This is found under the **Sales** menu.

4.1 Creating a New Sales Invoice

PATH **Sales › Invoice**

PERMISSION `create_invoice`

1. Go to **Sales** → **Invoice**.
2. Add products to the sale by searching the product name, scanning the barcode with a camera or scanner, or picking from the list. The search looks through **all** your products, not only the ones shown first.
3. For each product added, adjust the quantity and price if allowed.
4. If discounts are enabled, apply a discount per item or to the whole sale.
5. Choose a customer if you need one (for a credit sale or a registered customer): type a name or phone number and the system searches **all your customers instantly**. For a walk-in customer you can simply type a name, or leave it empty on a cash sale.
6. Check the **Grand Total** on the right (or at the bottom, on mobile).
7. Enter the amount paid and choose the Payment Method: Cash, Mobile Money, or Bank Transfer.
8. Add notes if needed in the notes field.
9. Click the button for the type of sale: **Complete Sale** (cash sale), **Save Credit** (credit sale), or **Save as Pending** (pending order) — see section 4.2.
10. The system prints a receipt automatically (if receipt printing is enabled), or shows a receipt preview before printing.

> **NOTE**
> You can scan a product's barcode directly with a phone camera or a barcode scanner — the system adds it to the sale without you typing the name, even if the product is not in the short list on screen.

> **WARNING**
> If you try to sell more than the available stock, the system will warn you — unless **Allow Negative Stock** is enabled in Settings.

4.2 Sale Types

Type	Description
Cash Sale	Full payment is received on the spot; the sale is completed immediately.
Credit Sale	The customer pays later under credit terms; the debt is recorded under Debits.
Pending Order	The sale is saved without being completed — for example the goods haven't been collected yet or payment isn't complete — and can be finished later.

4.3 Pending Orders

PATH Sales › Pending Orders

Here you can see all orders that have been saved but not yet completed.

1. Go to **Sales** → **Pending Orders**.
2. Search for an order by order number or customer name.
3. Click the order to reopen it for editing.
4. Add or change items as needed, then click **Complete Order** to close it as a full sale (cash or credit).

> **NOTE**
> A pending order with no payment records can still be deleted. An order with payment records cannot be deleted.

4.4 Sales History

PATH Sales › Sales History

A complete list of every invoice ever created, with the ability to search by invoice number or customer name, view the details of any invoice, and reprint a receipt.

4.5 Sales Returns

PATH Sales › Sales Returns › Create Return

Use this whenever a customer returns something they bought — due to a defect, a change of mind, or another reason.

1. Go to **Sales** → **Sales Returns**.
2. Click **Create Return**.
3. Look up the relevant invoice (by invoice number).
4. Select the products being returned and the quantity (it cannot exceed the quantity originally sold).
5. Choose a **Return Reason** and a **Refund Method** (Cash Refund or Bank Refund).
6. Click **Save** — the stock for the returned items is automatically added back to inventory.

4.6 Debits

PATH Sales › Debits

This section shows every customer with an outstanding balance from credit sales, including due dates and overdue status.

1. Go to **Sales** → **Debits**.
2. Click a customer's debt to see the full details.
3. Click **Record Payment** whenever you receive a payment (full or partial) from the customer.
4. Enter the amount paid and the payment method, then save.
5. To remind the customer, click **Notify Customer**. The window **Send Payment Reminder** shows a ready-made message (a friendly reminder, or an overdue notice if the due date has passed). Edit it if you wish and click **Send SMS**.
6. You can also use the WhatsApp reminder button to open WhatsApp with the same message ready to send.

> **NOTE**
> Invoices that have passed their due date without being paid are shown as overdue. The SMS reminder is sent through the SMS service of your business — see Chapter 8.

4.7 Customers

PATH Sales › Customers

1. Go to **Sales** → **Customers**.
2. Click **New Customer**.
3. Fill in the customer's name, phone number, email, and address (as required by your store).
4. If you allow this customer to buy on credit, set a **Credit Limit** and **Credit Due Days**.
5. Click **Save**.

> **NOTE**
> You can use **Walk-in Customer** for cash sales where you don't need to register the customer's details.

5 CHAPTER 5 Purchases

The Purchases section helps you manage the full procurement cycle from your suppliers: placing orders, receiving goods, confirming invoices, and making payments. It's found under the **Purchases** menu.

5.1 Suppliers

PATH Purchases › Suppliers

1. Go to **Purchases** → **Suppliers**.
2. Click **New Supplier**.
3. Fill in the supplier's name, contact person, phone, email, address, city and country.
4. Enter payment terms and the TIN/VAT number if applicable.
5. Click **Save**.

5.2 Purchase Orders

PATH Purchases › Purchase Orders › New Purchase Order

PERMISSION `view_purchase_orders / create_purchase_orders`

A purchase order (PO) is a formal request to a supplier for goods you want to buy, before they've been received.

1. Go to **Purchases** → **Purchase Orders**.
2. Click **New Purchase Order**.
3. Select the **Supplier**.
4. Add the products you want to order, their quantities, and unit price.
5. Enter the **Expected Date** for receiving the goods, any tax, and a shipping address (optional).
6. Click **Create Order**.
7. An authorized user can then approve the order (**Approve Purchase Order**) before it moves on to being received.

> **NOTE**
> A purchase order can be cancelled before it's received (**Cancel Purchase Order**).

5.3 Receiving Goods — GRN (Goods Received Note)

PATH Purchases › Goods Received › Create GRN

The GRN is the step that confirms the actual goods that arrived from the supplier, which will add directly to your stock.

1. Go to **Purchases** → **Goods Received**.

2. Click **Create GRN**.
3. Select the relevant purchase order to auto-fill the products, or enter them manually.
4. For each product, enter the actual **Qty Received** (it may differ from what was ordered).
5. If you use batch tracking, fill in the **Batch Number** and **Expiry Date**.
6. Enter the cost price for each item received (if it has changed from what was on the PO).
7. Click **Receive Goods** — stock will increase automatically.

> **WARNING**
> The received quantity cannot exceed the remaining quantity on the related purchase order.

5.4 Supplier Invoices

PATH Purchases › Supplier Invoices › New Supplier Invoice

After receiving goods (GRN), create a supplier invoice to show the amount you owe that supplier.

1. Go to **Purchases** → **Supplier Invoices**.
2. Click **New Supplier Invoice**.
3. Select the relevant GRN to auto-fill items and amounts, or enter them manually.
4. Enter the **Supplier Invoice No.** (as given by the supplier).
5. Click **Save**.

5.5 Supplier Payments

PATH Purchases › Supplier Payments › Create Supplier Payment

1. Go to **Purchases** → **Supplier Payments**.
2. Click **Create Supplier Payments**.
3. Select the supplier invoice you want to pay.
4. Enter the amount being paid and the payment method (Cash, Bank Transfer, etc).
5. Click **Save** — the supplier's outstanding balance will decrease.

5.6 Supplier Returns

PATH Purchases › Supplier Returns › New Supplier Return

1. Go to **Purchases** → **Supplier Returns**.
2. Click **New Supplier Return**.
3. Select the relevant GRN to create the return from.
4. Select the products and the quantity being returned to the supplier (defective, poor quality, etc).
5. Click **Save**.

6. An authorized user can approve the return — this will automatically adjust the related supplier invoice amount.

6 CHAPTER 6 Expenses

Use this section to record operating costs that aren't part of purchasing products — for example rent, electricity, fuel, salaries, transport, and so on.

6.1 Recording a New Expense

PATH Expenses › Add Expense

PERMISSION `view_expenses / create_expenses`

1. Go to **Expenses**.
2. Click **Add Expense**.
3. Select the expense **Category**.
4. Enter the **Amount**.
5. Select the **Expense Date**.
6. Select the **Payment Method** used.
7. Add a description and a reference number (receipt/invoice) if you have one.
8. Click **Save**.

> **NOTE**
> You can edit or delete a previously recorded expense by clicking on it in the list.

To see your expenses broken down by category for any period, use the Net Profit Report (section 7.4). Payments made to suppliers are listed under Expenses Reports (section 7.6).

7 CHAPTER 7 Reports

The Reports section gives you an in-depth look at how your business is performing — sales, profit, purchases, inventory, and expenses — for any period you choose (today, yesterday, the last 7 days, this month, last month, this year, or a custom range).

> **NOTE**
> Report names appear in English in the system. Every report can be exported as PDF or Excel from the buttons above the report table.

7.1 Sales Reports

PATH Reports › Sales Reports

Choose the report you want from the report selector:

- Sales Summary Report — invoice-level overview of total sales.
- Sales Detailed Report — line-item detail for every product sold.
- Sales Returns Report — products returned and their value.
- Sales Comparison Report — day-by-day sales performance.
- Sales By Product Report — best-selling products by revenue.
- Sales By Cashier Report — performance of each sales cashier.
- Sales By Customer Report — summarized sales per customer with debt balance.
- Sales By Category Report — revenue and quantity per product category.
- Sales By Payment Report — totals broken down by payment method.
- Sales Debits Report — credit sales with an outstanding balance.

7.2 Purchase Reports

PATH Reports › Purchases Reports

- Purchase Summary Report and Purchase Detailed Report.
- Purchase By Product Report and Purchase By Supplier Report.
- Purchase Trends Report — how your purchasing changes over time.
- GRN Report — goods received notes and their status.
- Supplier Invoices Report — payment status and balance for each invoice.
- Supplier Payable Report — outstanding invoice balances owed to suppliers.
- Supplier Performance Report — fulfilment rates and delivery times.
- Cost Analysis Report — breakdown of order costs (tax, shipping, etc).
- Stock Replenishment Report — products below minimum stock and estimated reorder cost.
- Purchase Returns Report — products returned to suppliers.

7.3 Profit Reports

PATH Reports › Profit Reports

- Profit Summary Report — profit at the invoice level.
- Profit Detailed Report — cost vs. selling price for every product.
- Profit By Product, By Category, By Customer, and By Cashier Reports.
- Profit Margins Report — products ranked by profit margin percentage.
- Profit Trends Report — profit analysis over time (daily, weekly, monthly, yearly).

7.4 Net Profit Report

PATH Reports › Net Profit Report

The Net Profit Report shows what your business really earned after **all** costs: Total Income, Gross Profit (before expenses), Total Expenses, and **Net Profit**, together with a breakdown of expenses by category. In short: Net Profit = Total Income − Total Purchases − Other Expenses.

7.5 Inventory Reports

PATH Reports › Inventory Reports

- Current Stock Summary Report and Current Stock Detailed Report.
- Stock Movement Report — stock coming in and going out over a period.
- Incoming Stock Report and Outgoing Stock Report.
- Fast Moving Products Report and Dead Stock Report.
- Below Alert Level Report — products under their alert quantity.
- Out of Stock Report.
- Stock Adjustments Report — adjustment records.
- Stock Transfers Report — transfers between stores.
- Product Ledger Report — complete movement history per product.

7.6 Expenses Reports

PATH Reports › Expenses Reports

Track the supplier payments made over any period (payment number, supplier, amount and date). To see your **operating expenses** (rent, electricity, etc.) broken down by category, use the Net Profit Report (section 7.4).

7.7 Day Report

PATH Dashboard › Day Report shortcut

The Day Report is a sales manifest: every transaction for the selected day, with Total Transactions, Total Sales, Total Profit, Profit Margin and a Payment Method Breakdown. It is ideal for closing the day or handing over a shift. Open it from the shortcut on the Dashboard.

7.8 Exporting and Printing Reports

1. Choose the report type you want under the **Reports** menu.
2. Select a period (from and to dates), or use a shortcut like **Last 7 Days**, **This Month**, **This Year**.
3. Review the report table on screen.
4. Use the export buttons for a printable PDF copy, or an Excel file (.xlsx) for further analysis.

8 CHAPTER 8 SMS Messaging

The Messaging section lets you send SMS to your customers and contacts straight from BizTrack — payment reminders, offers, announcements — and keep track of everything you have sent. It is found under the **Messaging** menu.

> **NOTE**
> SMS needs an SMS service to be set up for your business first. If you see **SMS is not set up yet**, ask your administrator or contact support.

8.1 Sending a Message

PATH **Messaging › Recently Sent › Send Message**

PERMISSION `manage_messaging`

1. Go to **Messaging** and click **Send Message**.
2. Under **Recipients**, choose how to pick the receivers: Individual Number(s) (type phone numbers separated by commas, e.g. 255712345678) or Group / Subgroup (pick a saved group, and tick **Include sub-groups** to include its sub-groups).
3. Optionally choose a template under **Use a template (optional)**.
4. Type your message. The counter shows the number of characters and how many SMS parts it will use — a message longer than one SMS part uses more than one SMS of your balance.
5. Click **Send**.

8.2 Recently Sent

PATH **Messaging › Recently Sent**

Lists the messages you have sent, with their status (sent, partial or failed). Click a message to open **Message Details**: date, who sent it, group, the message itself and the list of recipients with the result for each.

8.3 All Contacts

PATH **Messaging › All Contacts**

Your phone book for messaging.

1. Click **Add Contact**.
2. Enter the contact name (optional) and the phone number (required, e.g. 255712345678).
3. Optionally tick the groups the contact should belong to, then save.

You can edit a contact, change its groups, or delete it from the same list.

8.4 Groups

PATH Messaging › Groups

Groups let you send one message to many people at once — for example **Wholesale customers** or **Staff**.

1. Click **New Group** and enter the group name.
2. To make a sub-group, enter a name under **New Sub-group Name**, choose the parent under **Under Group**, and create it. (A sub-group cannot have its own sub-groups.)
3. Click a group to open it. There you can Add from list (existing contacts) or Add new contact, remove a contact from the group (**Remove from group** — the contact itself is not deleted), and **Send bulk SMS to group**.

8.5 Templates

PATH Messaging › Templates

Templates are messages you send often (for example a payment reminder), saved so you can reuse them in one click.

1. Click **New Template**.
2. Enter the template name and the message text, then save.
3. When sending a message, pick the template and the text is filled in for you.

8.6 Account & Top-up (SMS Balance)

PATH Messaging › Account & Top-up

PERMISSION `view_messaging / manage_messaging_account`

This page shows your SMS balance and the totals of messages sent, and lets you add SMS credit. What you see depends on how your business's SMS service is set up — the page only shows options that really work for you:

- **SMS Balance** — the number of SMS you have left (not an amount of money). Use **Refresh balance** to read it again.
- **Paying directly** — if your SMS service supports online payment, you will see payment cards: **top-up via USSD** (enter the amount and your phone number, click **Send USSD Push** and approve the prompt on your phone) and **pay via Lipa Namba / QR** (enter the amount, create the order, pay, then click **Check Status**). When the payment completes, your balance updates.
- **Requesting a top-up** — if your SMS service is topped up by the BizTrack team, you will see **Request SMS top-up**. Optionally enter the amount you want and a note, then click **Request top-up**. The system emails our support team your details (your name, email and phone, your business, and the system address you are using). You will see the confirmation **Your top-up request has been sent. We will get back to you shortly.** — our team will then contact you to complete the top-up. You can send one request every 10 minutes.

> NOTE
> Message totals on this page are counted from the messages sent through BizTrack.

9 CHAPTER 9 Users, Roles & Permissions

BizTrack lets you add your staff as system users, and control exactly what each one can see or do through Roles and Permissions. This is found under the **Users** menu (visible to Owners/Managers only).

9.1 Adding a New User

PATH Users › Users › Add User

PERMISSION `view_users / Owner or Manager`

1. Go to **Users** → **Users**.
2. Click **Add User**.
3. Fill in the **Full Name** and **Email** of the user.
4. Set an initial **Password** (the user can change it later).
5. Select the **Role** to assign to this user.
6. Set the **Account Status** (Enable/Disable).
7. Click **Save**.

> **NOTE**
> The new user will use that email and password to log in for the first time.

9.2 Roles

PATH Users › Roles

A role is a group of permissions that defines what a user can do — for example a **Sales Cashier** role might only be able to create invoices, while a **Manager** role can view all reports and manage staff.

1. Go to **Users** → **Roles**.
2. Click **Add Role**.
3. Enter the role name (e.g. **Shop Cashier**) and a short description.
4. Click **Save**, then go to **Permissions** to set the specific permissions for that role (see 8.3).

9.3 Permissions

PATH Users › Permissions

Every feature in the system (e.g. **view_products**, **create_invoice**, **view_sales_reports**) has its own specific permission. This is where you decide which features a given role can access.

1. Go to **Users** → **Permissions**.
2. Select the **Role** whose permissions you want to change.

3. Scroll through the list of permissions (grouped by area such as Sales, Purchases, Inventory, Reports, etc) and check or uncheck each permission.
4. You can use **Check All** to quickly enable all permissions for that role.
5. Changes are saved automatically or by clicking **Save**, depending on the page.

> **WARNING**
> Be careful when granting permissions for managing users and settings — these should only go to trusted people (typically the Owner/Manager).

9.4 My Profile

PATH **User picture (top right) › My Profile**

Every user can edit their own profile without needing any special permission.

1. Click your picture/name at the top right of the screen.
2. Select **My Profile**.
3. Click **Edit Profile** to change your Full Name, Email, Phone and Preferred Language (the language the system shows you — English or Swahili), then **Save Changes**.
4. Use **Upload avatar** to set a profile picture, or **Remove avatar** to delete it.
5. To change your password, click **Change Password**, enter your Current Password, then your New Password (minimum 8 characters) and confirm it, then click **Save Password**.

> **NOTE**
> Your Preferred Language also decides which language the User Manual download offers you first (see Chapter 14).

10 CHAPTER 10 Multi-Store

If your business has more than one store (branches), BizTrack lets you manage them all under a single account — each store keeps its own stock, sales, and staff, while you can still see the full picture of the whole business whenever you need to.

> **NOTE**
> This feature must be enabled in Settings (**Multi-Store Support**).

10.1 Adding a New Store

PATH **Stores › New Store**

PERMISSION `view_stores / create_stores`

1. Go to **Stores**.
2. Click **New Store**.
3. Enter the **Store Name**, the **Store Code** (a short code that identifies the store) and the **Location**.
4. Click save.

10.2 Editing or Deleting a Store

1. Go to **Stores**, click the relevant store.
2. Click **Edit Store** to change its details.
3. To delete a store: use the delete action on the store row — remember that all data for that store will be lost permanently and cannot be recovered.

> **WARNING**
> Deleting a store is a permanent action. Make sure you've exported or backed up any important data for that store before proceeding.

10.3 Switching Between Stores

Use the store selector at the top of the main menu to switch which store you're working in at any time (see section 1.7).

11 CHAPTER 11 System Settings

The Settings section gives you control over how the system behaves for your store — from business information, currency, and tax, to security and backups. It's found under the **Settings** menu and is typically accessible only to the Owner/Manager.

11.1 Business Information

PATH Settings › Configurations › Business Information

Set the core business details that appear on receipts and invoices.

- Business Name
- TIN Number and VRN Number
- Business Address, Phone, and Email
- Website
- Receipt Footer Text (e.g. **Thank you for your business!**)

> **NOTE**
> Upload your company logo and receipt header image under Settings → Uploads (section 11.4). After changing anything on the Configurations page, click **Save Configuration**.

11.2 System Defaults

PATH Settings › Configurations › System Defaults

Here you set how the system behaves by default for your store:

- Default Language (Swahili / English)
- Default Currency (Tsh, $ or €) and Currency Position (before/after the amount)
- Number of Decimal Places (0 to 4)
- Default Tax Rate (VAT %, from 0 to 100)
- Default Payment Method (Cash, Mobile Money, Bank Transfer)
- Default Discount Type (Amount or Percentage) and Default Discount Mode (Per Unit or Volume)
- Default Customer Type (Walk-in or Registered)
- Default Credit Due Days (1 to 90)
- Default Receipt Size (58mm, 80mm, A5, A4)
- Default Report Date Range (Today, Yesterday, Last 7 Days, This Month, Last Month, This Year, Custom)
- Date Format and Time Format (12 or 24 hours)

11.3 Operations Settings

PATH Settings › Configurations › Operations Settings

These are the toggles you use to enable/disable specific system features to suit your business:

Feature	What it does
Multi-Store Support	Allows adding and managing more than one store.
Multi-Language Support	Lets users switch the interface language.
Support Credit Sales	Allows selling products on credit and tracking debts.
Support Multiple Payment Methods	Allows one invoice to be paid via more than one method.
Allow Discount	Enables discounts on sales.
Allow VAT	Shows and calculates VAT on invoices.
Multi-Price Support	Enables different price categories (retail/wholesale).
Show Currency	Shows the currency symbol next to prices and totals.
Make Price Fixed	Prevents changing the price during a sale.
Use Batch-wise Price	Price depends on the specific batch of goods received.
Allow Record Sales for Past Dates	Allows recording a sale with a backdated date.
Allow Record Purchases for Past Dates	Allows recording a purchase with a backdated date.
Enable Receipt Printing	Turns on the ability to print a receipt after a sale.
Receipt Preview	Shows the receipt first before printing it automatically.
Show Logo on Receipt	The business logo appears at the top of the receipt.
Enable Expire Date	Allows setting an expiry date for a product (batch).
Allow Negative Stock	Allows selling even when stock has reached zero.
Show Paid/Change on Receipt	The customer's change appears on the printed receipt.
Require Full Customer Registration	A sale requires complete customer details before it can be completed.
Use Customer Credit Limit	Credit sales are blocked once a customer reaches their maximum credit limit.
Show Time On Dates	Receipts and reports show the date together with the time.
Show Unit on Stock	The unit (e.g. **kg**, **pc**) appears next to the quantity.
Allow Inter-Store Transfer	Enables transferring stock between multiple stores.

> **NOTE**
> After changing settings, click **Save Configuration** for the changes to take effect.

11.4 Uploads

PATH Settings › Uploads

Upload key branding images for your business:

- Company Logo — appears throughout the app and on receipts.
- Receipt Header Image — recommended to be wide (e.g. 800×200px).

11.5 Bulk Operations

PATH Settings › Bulk Operations

This offers the same bulk import/export of products, prices, and stock via Excel/CSV described in 3.6, kept in one place for administrator convenience.

11.6 Security

PATH Settings › Security

The **Security Center** gives you an overview of your store's security status along with key controls:

- Max Login Attempts — an account is locked after this many consecutive failed logins.
- Password Expiry (days) — prompts users to change their password periodically. Set 0 to disable.
- Session Timeout (minutes) — the session is automatically **locked** after this much inactivity; the user unlocks it with their password (see section 1.8).
- Audit Logging — records every user action and system event in the activity logs.
- Data Encryption — enforces encrypted connections (HTTPS/TLS) for all data in transit.
- Two-Factor Authentication and IP Whitelisting — marked **Coming Soon**; they are not active yet.

1. Go to **Settings** → **Security**.
2. Adjust the controls you need.
3. Click **Save Security**.

11.7 Tools

PATH Settings › Tools

Database Backup

Download a full backup of your store's data for safekeeping.

1. Go to **Settings** → **Tools**.
2. Click **Download Backup** to get an instant copy of the database.

> **NOTE**
> Automatic backups and restoring a backup are handled by the BizTrack team — contact support if you need to restore data.

Database Health Check

Click **Run Health Check** to confirm the database is healthy: you see the connection status, the response time and how many tables were checked.

Clear Cache

Use this if the system is showing stale data or getting stuck — it clears temporary storage so fresh data is loaded.

Activity Logs

A list of every action taken in the system (who did what, and when). Filter by action, user, or date range and open an entry to see exactly what changed (Before / After) — useful for tracking and investigation.

Export Data

Download all of your store's data (products, customers, suppliers, inventory) as a file for migration or backup.

11.8 Notifications

PATH **Settings › Notifications**

Choose which events notify you, and how: **in-app** (inside BizTrack, in real time), **email**, or **SMS**.

- Low Stock Alert — when a product falls to its alert quantity.
- New Sale — whenever a sale is completed.
- Payment Due — when customer payments become overdue.
- Purchase Received — when goods are received.
- Stock Transfer — when stock is transferred between stores.
- Sales Returns and Stock Adjustments — when they are created or approved.
- New User Registrations — people waiting for store access approval.
- Security Activity — important account and password activity.

Use **Run Now** to run the scheduled checks immediately and see the notifications they would send.

11.9 Appearance

PATH **Settings › Appearance**

Choose the theme you prefer for the system's look — light or dark. This preference is saved only for your own session; other users can choose their own theme independently.

12 CHAPTER 12 Subscription & Billing

PATH Subscription

This section shows the status of your BizTrack subscription, its expiry date, your last payment, and a full payment history.

12.1 Checking Your Subscription Status

The page shows three quick summary cards:

- Current Status — whether your subscription is **ACTIVE** or otherwise, and the billing cycle (Monthly, Quarterly, or Annual).
- Expiration — the date your subscription expires, and the grace period if you don't renew on time.
- Last Payment — the date of your most recent payment and the currency used.

12.2 Making a Subscription Payment

1. Go to **Subscription**.
2. Under **Renew or Activate Plan**, select the **Subscription Plan** you want.
3. Choose the **Billing Cycle** (Monthly / Quarterly / Annual).
4. Enter the **Phone Number** you'll pay from.
5. Check the **Amount to Pay** shown.
6. Click **Pay Now** and follow the prompts on your phone to complete payment.

> **NOTE**
> Payments are currently accepted via Airtel Money, Mixx by Yas, and HaloPesa only.

A complete payment history (date, amount, status, and reference number) is available further down the page under **Subscription Transaction History**.

13 CHAPTER 13 BizTrack AI

PATH BizTrack AI

PERMISSION `ai_access`

BizTrack AI is an assistant you can ask questions about your business in plain language, and it answers using your store's actual data (sales, profit, products, customers, expenses) — not estimates.

13.1 How to Use BizTrack AI

1. Go to **BizTrack AI** in the main menu.
2. Type your question in the **Ask anything about your business...** field, for example: **How are today's sales performing?**, **Which products are leading today?**, or **Why is my profit down?**
3. Click send and wait for the answer — you'll also see the **Sources** used to build that answer.
4. You can start a **New Conversation** at any time to ask about a different topic.

> **NOTE**
> The Dashboard also has an **AI Business Summary** that gives you an automatic short summary of how your business did today, without even having to ask a question.

14 CHAPTER 14 Help, Support & User Manual

14.1 Downloading the User Manual

PATH User Manual (main menu)

This manual is available inside BizTrack, in both English and Swahili.

1. Click **User Manual** in the main menu.
2. The manual in your own language (from your Preferred Language) is shown first — click **Download PDF** to save it as a PDF.
3. The manual in the other language is offered below it. The PDF is easy to read on a phone and can be shared or printed.

14.2 Submitting a New Ticket

PATH Support Center

If you run into any problem or need help, use the Support Center to submit a ticket.

1. Open the Support Center (via the help icon available on every page, or the Support menu).
2. Click **New Ticket**.
3. Choose the category: Problem / Bug, Question / How-to, Billing & Payments, Feature Request, or Other.
4. Write a subject line and describe your issue in detail: what happened, what you expected, and the steps to reproduce it.
5. Enter your name and email (if you're not logged in).
6. Click **Submit Ticket**.

> **NOTE**
> After submitting, you'll receive a ticket number — keep it so you can track your ticket's status later. A confirmation is also sent to your email.

14.3 Tracking Your Ticket

1. Go to Support Center → **Track Ticket**.
2. Enter the ticket number and the email you used to submit it.
3. Click **Check Status** to see replies and progress on your ticket.

While logged in you can also open **My Tickets** — all the tickets you have ever submitted.

15 CHAPTER 15 General Tips & Troubleshooting

15.1 Tips for Getting the Most out of BizTrack

- Perform a Stock Count regularly to catch shrinkage early.
- Set an accurate Alert Quantity for every product so you get a warning before it runs out completely.
- Review Debits regularly and send payment reminders before the due date.
- Make sure you're working in the correct Store before starting sales or purchases (for multi-store businesses).
- Download a Database Backup regularly, and ask support about automatic cloud backup.
- Only give administrative permissions (Users, Settings, Security) to trusted people.
- Use the Profit Reports and the Net Profit Report every month to understand which products and costs matter most.
- Close each day with the Day Report from the Dashboard.
- Save the messages you send often as Templates, and keep your customers in Groups so one click reaches everyone.

15.2 Common Troubleshooting

Problem	Solution
I can't see a certain menu item	Contact your store administrator — your role may not have permission to view that section (Users → Permissions).
I forgot my password	Click **Forgot password?** on the login page and follow the instructions (see section 1.4).
The screen says **Session Locked**	You were inactive for a while. Enter your password and click Unlock (see section 1.8).
The system is showing old data	Go to Settings → Tools → Clear Cache, then reload the page.
I can't sell a product — stock is empty	Make sure you've received the goods via GRN, or made a Stock Adjustment to add the quantity.
The price doesn't look right	Check Price Categories and the Price List — the product may be using a different price category than you expected.
A customer or product doesn't show when I search	Type at least part of the name or phone number — the search covers all records. If it still doesn't appear, check the spelling or that the item is not inactive.
SMS says **not set up yet**	The SMS service for your business needs to be set up by the BizTrack team. Contact support (see Chapter 14).

Problem	Solution
I need more SMS credit	Open Messaging → Account & Top-up. Pay directly if you see payment cards, or click **Request top-up** and our team will contact you (see section 8.6).
I ran into an error I don’t understand	Submit a ticket via the Support Center describing exactly what happened (see Chapter 14).

Quick Reference: Where to Find Things

Menu	Pages
Sales	Invoice • Pending Orders • Sales History • Sales Returns • Debits • Customers
Purchases	Purchase Orders • Goods Received • Suppliers • Supplier Invoices • Supplier Payments • Supplier Returns
Inventory	Products • Current Stock • Current Stock Value • Stock Value History • Price List • Stock Adjustment • Stock Count • Stock Transfer • Import / Export
Categories	Product Categories • Price Categories
Reports	Sales Reports • Expenses Reports • Purchases Reports • Profit Reports • Net Profit Report • Inventory Reports
Expenses	Expenses
Users	Users • Roles • Permissions
Stores	Stores
Messaging	Recently Sent • All Contacts • Groups • Templates • Account & Top-up
Settings	Configurations • Uploads • Bulk Operations • Security • Tools • Notifications • Appearance
