Modern Business & Point-of-Sale Management System

USER MANUAL

VERSION 2

How to Use BizTrack to Run Your Business Day to Day

Version 2 · November 2026 Edition

Prepared for BizTrack business owners and users

About This Manual

BizTrack helps you run your whole business from one place — sales, purchases, stock, expenses, customers, staff, SMS and reports — for a single store or many.

This manual is written for everyday users: the owner, a manager, a cashier or an accountant. It explains each screen step by step, using the same names you see on the screen. It does not cover technical operation (servers, databases, code).

How to read the boxes

NOTE	Useful information to remember.
WARNING	Something that can cause data loss or mistakes — read carefully.
TIP	A faster or better way of doing things.

What's New in Version 2

This edition describes BizTrack Version 2 and replaces the October 2026 edition. Every screen was checked again, and the manual now covers:

- A faster start, and lists that become easy-to-read cards on a phone (Chapter 4 and 5).
- BizTrack as an installable app that tells you when a new version is ready (section 1.9).
- Safer sign-in, with a short pause after repeated wrong passwords (section 1.2).
- A dashboard for every role, including roles without the money figures (section 1.5).
- Barcode printing, delivery notes, approval of sales returns, and goods inspection when receiving stock (Chapters 2 to 5).
- Receipts that print straight to the printer through QZ Tray, from every place a receipt can be printed (section 4.4).
- Reports with the usual columns, a Total row, charts, and exports to PDF, Excel and CSV (Chapter 7).
- Integrations — your own email mailbox, SMS gateways and Google Drive backup (section 11.10).
- Friendly error cards instead of blank screens (Chapter 15).
- A summary of all of this in Chapter 16.

CHAPTER 1

1 Getting Started with BizTrack

1.1 What is BizTrack?

BizTrack is a digital system for managing your business — sales, purchases, stock, customers, suppliers, staff and finances — for one store or several stores at once. It runs in your browser on a computer, tablet or phone, and it can also be installed on the device like an app (section 1.9). Everything is available in English and Swahili.

This is Version 2 of BizTrack. The screens keep the names you already know, but they open faster, lists turn into easy-to-read cards on a phone, reports have totals and charts, and receipts can be printed straight to the printer.

1.2 Logging In

Every user has their own account with an email address and a password.

1. Open BizTrack in your browser (or the installed BizTrack app).
2. Enter the email address you registered with.
3. Enter your password.
4. Click **Login**.

NOTE — If your store administrator gave you an account, use the email and password they provided. You can change the password later under **My Profile** → **Change Password**.

WARNING — To protect accounts, sign-in pauses for a few minutes after 10 wrong passwords for the same email within 15 minutes. The message tells you how long to wait. Signing in correctly never counts against you, and other people are not affected. If you have forgotten the password, use **Forgot password?** instead of guessing.

1.3 Registering a New Account

1. On the login page, click **Register here.**
2. Fill in the **Store Code** of the store you are joining, your **Full Name**, your **Email** and a **Password**.
3. Click **Register**.
4. Open the email you receive and verify your address (also check your spam folder).
5. Your account starts disabled and without a role. The store owner or manager gives you a role and enables the account (section 9.1). After that, log in with your email and password.

NOTE — The Store Code identifies the store. Your store administrator can give it to you — it is listed under **Stores**. The administrator is told when someone has registered and is waiting for access.

1.4 Forgot Password

1. On the login page, click **Forgot password?**
2. Enter the email address registered to your account.
3. Open the email you receive and click the reset link.

4. Enter a new password and confirm it. A new password must be at least 6 characters.

> **NOTE** When you change your password later from **My Profile** → **Change Password**, the new password must be at least 8 characters long.

> **TIP** You may ask for a reset email about 10 times an hour for the same address. If the email does not arrive, check the spam folder before asking again.

1.5 The Dashboard — Your Business at a Glance

After you log in you land on the Dashboard, with a greeting and the name of the store you are working in. Use **Refresh** to reload the figures. It shows:

- **Today's Sales** — revenue and number of sales today, with the change compared with yesterday.
- **This Month** — revenue and number of sales for the month so far.
- **Amount Due** — money still owed on today's sales. Click it to open Debits.
- **Expenses** — what you spent this month.
- **Revenue Trend** — a chart of revenue over the recent days.
- **Payment Method Breakdown** — how customers paid.
- **Recent sales** and **Top Products**, with **View all** to open the full list.
- **Quick Actions** — shortcuts to the pages you use most, such as Invoice, Day Report, Products, Customers, Purchase Orders, Expenses and Sales Reports. Only the shortcuts your role may use are shown.

If your role has BizTrack AI, short AI cards with a summary of your business also appear (see Chapter 13).

> **NOTE** If your role does not include the dashboard figures or the sales reports, the Dashboard shows a short notice, today's date and a card for each page your permissions allow — for example Invoice, Sales History, Customers, Products, Current Stock, Purchase Orders, Expenses and Sales Reports. Click a card to open that page. If no card is shown, ask your store administrator to give your role the permissions you need (Chapter 9).

1.6 Understanding the Main Menu

The main menu is on the left of the screen. It takes you to every part of the system: **Dashboard**, **Sales**, **Purchases**, **Inventory**, **Categories**, **Reports**, **Expenses**, **Users**, **Stores**, **Messaging**, **Settings**, **Subscription**, **BizTrack AI** and **User Guide**. You only see the entries your role is allowed to use.

- On a computer: click the arrow above the menu to collapse or expand the menu labels.
- On a phone or tablet: tap the menu icon (≡) at the top left to open the menu as a slide-out drawer.
- Click a section such as **Sales** to open its list of pages (for example **Invoice**, **Pending Orders**, **Sales History**).
- At the top of every page you will find the bell for notifications, the help icon (**Help & support**), the button to lock the screen, and your profile menu.

1.7 Selecting a Store

If your business has more than one store, use the store selector at the top of the page. All the data you see — products, sales, reports — belongs to the store you have selected.

1. Click the name of the current store.
2. Choose a different store from the list.

3. BizTrack loads the data of the store you chose.

> **WARNING** Make sure you are in the correct store before recording sales, purchases or stock adjustments — each store keeps its own stock and records.

1.8 Session Lock (Inactivity)

To protect your business data, BizTrack locks your session when you have been inactive for a while. The time limit is set by your administrator under **Settings** → **Security**. You are not logged out — the screen asks for your password and you continue where you stopped. You can also lock the screen yourself with the lock button at the top of the page.

1. Enter your password on the lock screen.
2. Click **Unlock** to return to the page you were working on.

> **NOTE** If you prefer to leave completely, click **Sign out instead** on the lock screen, or **Sign out** in your profile menu.

1.9 Installing BizTrack as an App

BizTrack can be installed so that it opens in its own window, with its own icon, like any other app — on a computer, a phone or a tablet.

1. Open BizTrack in your browser and sign in.
2. If your browser offers it, BizTrack shows an install message. Accept it. You can also use the browser's own menu (for example "Install app" or "Add to Home screen").
3. Open BizTrack from the new icon.

When a new version of BizTrack is released, the app shows a message offering to update. Accept it to continue with the new version.

> **NOTE** Installing is optional. BizTrack works exactly the same in the browser.

BizTrack
TRACK • GROW • SUCCEED

2 CHAPTER 2 Products & Categories

Before you start selling, add your products to the system. This is done under **Inventory** → **Products**, with **Categories** to keep them organised.

2.1 Adding a New Product

PATH	Inventory › Products › New Product
PERMISSION	`view_products / create_products`

1. Go to **Inventory** → **Products**.
2. Click **New Product**.
3. Fill in the **Product Name**.
4. Select the **Unit** (for example Piece, Kilogram, Box, Crate, Litre).
5. Select the **Product Category** (if it does not exist yet, create it first under **Categories** — see section 2.3).
6. Enter the **Barcode** — type it, or use the scan button to read the product's real barcode with the camera.
7. Enter the **Cost Price** and the **Selling Price**. The selling price applies to the default price category (section 2.4).
8. Enter the **Current Stock** on hand (the opening stock).
9. Enter the **Alert Quantity**: BizTrack warns you when stock falls to or below this number.
10. Choose the **Status**: **Active** (can be sold) or **Inactive** (hidden from selling).
11. If expiry tracking is enabled in Settings, fill in the **Manufactured Date** and **Expiry Date**.
12. Add a **Product Description** and an **Image** (both optional).
13. Click **Save**.

> **NOTE** The barcode must be unique — two products cannot share the same barcode. To set different prices for other customer groups, use Price Categories and the Price List (sections 2.4 and 2.5).

2.2 Editing, Printing a Barcode or Deleting a Product

1. Go to **Inventory** → **Products**.
2. Search for the product by name or barcode.
3. Use the row actions: **View**, **Edit** (to change its details), **Print Barcode** (to print a barcode label) or **Delete**.
4. To remove several products at once, tick them in the list and use the delete button that appears.

> **WARNING** Deleting a product cannot be undone. If a product has sales or purchase history, it is safer to edit it and set its **Status** to **Inactive** instead of deleting it.

2.3 Product Categories

PATH	Categories › Product Categories

Categories group your products (for example Beverages, Building Materials, Clothing) to make searching easier and to break reports down by category.

1. Go to **Categories** → **Product Categories**.
2. Click **New Category**.
3. Enter a **Category Name** and a **Description** (optional).
4. Click **Create**.

2.4 Price Categories

PATH **Categories › Price Categories**

If your store uses different prices for different customer groups (for example Retail and Wholesale), use Price Categories. This feature must first be enabled in Settings under Multi-Price Support.

1. Go to **Categories** → **Price Categories**.
2. Click **New price category**, enter a name (for example Wholesale) and create it.
3. Go to **Inventory** → **Price List** to set each product's price for that category.

2.5 Price List

PATH **Inventory › Price List**

Here you view and update the prices of all products quickly, without opening each product.

1. Go to **Inventory** → **Price List**.
2. If you use price categories, choose the **Price Category** you want to work on.
3. Search for the product you want to reprice.
4. Click **Update price** and enter the new selling price (and cost price where it is shown).
5. Click **Update**.

NOTE You can also import or export prices in bulk with Excel or CSV — see section 3.6.

BizTrack
TRACK • GROW • SUCCEED

3 CHAPTER 3 Inventory & Stock

The Inventory section gives you full control over your stock — quantities on hand, their value, adjustments, transfers between stores and physical stock counts.

3.1 Viewing Current Stock

PATH Inventory › Current Stock

A list of all products and the quantity on hand. The **Status** column shows whether a product is well stocked, running low or out of stock, and **Expiring soon** marks batches close to their expiry date.

- In Stock — stock is above the alert quantity.
- Low Stock — stock has fallen to or below the alert quantity set on the product.
- Out of Stock — stock is zero or below.

Open a product with **View** to see its batches, with the batch number, cost price, selling price and dates. Use **Edit** to correct a batch, or **Stock Adjustment** to add or remove stock.

3.2 Stock Value

PATH Inventory › Current Stock Value

Shows the total value of your stock at cost price — how much capital is tied up in your stock at any time.

PATH Inventory › Stock Value History

Stock Value History records the value of your stock day by day, so you can see how it has grown or shrunk over time.

3.3 Stock Adjustment

PATH Inventory › Stock Adjustment

PERMISSION `view_stock_adjustment`

Use this to correct quantities whenever there is a difference that is not the result of normal sales — for example damaged goods, theft, loss or stock found during a count.

1. Go to **Inventory → Stock Adjustment**.
2. Click **New Adjustment**.
3. Select the product (and the batch, if you use batch-wise tracking).
4. Choose **Add Stock** or **Remove stock**.
5. Enter the **Quantity**.
6. Select a **Reason**: for example Expired, Customer Return, Stock Correction, Damaged, Found, Lost or Other.
7. Add **Notes** if needed.
8. Click **Save**.

WARNING Stock cannot go below zero unless Allow Negative Stock is enabled in Settings.

Open any product with **View** to read its **Adjustment History**. You can filter the list by product, reason and dates.

3.4 Stock Count

PATH **Inventory › Stock Count**

Use this when you count the stock on the shelves, to check that what the system shows matches what is really there.

1. Go to **Inventory** → **Stock Count**.
2. Search for products or choose a category.
3. For each product, type the quantity you counted in **Counted Qty**. BizTrack shows the **Difference** against **System Stock** as you type.
4. Click **Save Stock Count** and confirm. BizTrack adjusts the stock to match your count and keeps the count in the list (**Items checked**, **Adjustments made**).

NOTE Count regularly (for example monthly) to catch shrinkage early. Open a count with **View** to see exactly what was changed.

3.5 Stock Transfer Between Stores

PATH **Inventory › Stock Transfer**

Available only if you have more than one store and the transfer feature is enabled in Settings (Allow Inter-Store Transfer). If it is off, the page says **Inter-Store Transfer Disabled**.

1. Go to **Inventory** → **Stock Transfer**.
2. Click **New Transfer**.
3. Choose the **Destination Store** (the source is the store you are working in).
4. Add the products and the quantity to send; click **Add Item** for more.
5. Add **Notes** if needed and click **Save**.
6. A user with the right permission approves the transfer with **Approve**.
7. The other store then clicks **Receive**, enters what actually arrived and confirms. Stock is moved when it is received.

NOTE A transfer can be cancelled with **Cancel Transfer** before it is received, or deleted by an authorised user. The other store sees the transfer in the same list, with the direction shown.

3.6 Bulk Import / Export

PATH **Inventory › Import / Export**

Instead of adding products one by one, you can upload a long list of products, prices or stock in an Excel (.xlsx) or CSV file.

1. Go to **Inventory** → **Import / Export** (or **Settings** → **Bulk Operations**).
2. Click **Download Template** to get the correct file layout.
3. Fill in your data using that template.
4. Click **Click to select file** and choose the file you filled in.
5. BizTrack shows how many rows are valid and lists the rows with errors (use the show-errors link).

6. Click the import button to import the valid rows.

> **NOTE** Importing updates products that already exist (matched by barcode) and creates the new ones. The barcode is what identifies an existing product. You can also download your inventory as Excel at any time with **Export Data**.

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 4

4 Sales (POS)

This is where you record sales to customers — creating invoices, taking payments, tracking debts and managing customers. It is under the **Sales** menu. On a phone, the items of a sale and the lists on these pages appear as cards that are easy to read and touch.

4.1 Creating a New Sales Invoice

PATH	Sales › Invoice
PERMISSION	`create_invoice`

1. Go to **Sales** → **Invoice**.
2. Add products to the sale: pick from the **Select a product** list (it searches all your products), type or scan the **Barcode**, or tap **Scan barcode** on a phone to use the camera.
3. For each product added, change the **Quantity** and the **Price** if your store allows it. On a phone each product is a card with its own fields; on a computer the items are in a table.
4. If discounts are enabled, enter a **Discount** per item. If VAT is enabled, the **Tax** is calculated for you.
5. Choose a customer if you need one (for a credit sale or a registered customer) with **Select Customer**; for a walk-in customer type a name or leave it as **Walk-in Customer**. If price categories are enabled, choose the **Price Category**.
6. Check the **Subtotal** and the **Total** in the summary (below the items on a phone).
7. Choose the **Payment Method** — **Cash**, mobile money or bank transfer (for bank transfer, enter the **Reference Number**) — and enter the **Amount Paid**. **Full payment** fills in the whole amount. BizTrack shows the **Change** or the **Amount Due**.
8. Add **Notes** if needed. If your store allows past dates, you can change the **Sales Date**.
9. Click the button for the type of sale: **Cash Sale** (paid in full), **Credit Sale** (the customer pays later) or **Save as Pending** (kept for later) — see section 4.2.
10. If receipt printing is enabled, BizTrack shows the receipt (or prints it straight to the printer — see section 4.4).

Use **Clear** to remove everything from the sale and start again.

> **NOTE** Scanning a barcode with the camera or a scanner adds the product even if it is not in the short list on screen.

> **WARNING** If you try to sell more than the quantity available, BizTrack warns you — unless Allow Negative Stock is enabled in Settings. A credit sale needs a customer, and it is refused when the customer's credit limit would be exceeded (if the credit limit is switched on).

4.2 Sale Types

Type	Description
Cash Sale	Full payment is received at once and the sale is completed.
Credit Sale	The customer pays later; the debt is recorded under Debits. A customer is required.
Pending Order	The sale is saved without being completed — for example the goods are not collected yet or payment is not complete — and can be finished later. A customer is required.

4.3 Pending Orders

PATH Sales › Pending Orders

Here you see all orders that were saved but not yet completed.

1. Go to **Sales** → **Pending Orders**.
2. Search for an order by number or customer.
3. Use the row actions: **View** opens the order details; **Edit** reopens it on the Invoice page; **Cancel order** cancels it; **Delete** removes it.
4. In the order details you can **Record Payment** (see the **Payments** list), **Edit** the order, or click **Complete Sale** to finish it as a sale.

NOTE Cancelling an order that already has payments asks for a note — **Reason for cancelling**. An order with payments cannot be deleted, only cancelled. After a cancelled order you can use **Reopen** if it needs to be worked on again.

4.4 Sales History

PATH Sales › Sales History

A list of every sale, with search by invoice number or customer and filters for the date and type.

1. Go to **Sales** → **Sales History**.
2. Click **View** to see the details of an invoice.
3. Click **Receipt** to reprint the receipt, **Delivery Note** to download a delivery note as a PDF, or **Sales Return** to return goods from this sale.

NOTE Receipt printing has two modes, set in Settings → Configurations. With **Receipt Preview** on, the receipt page opens first and you print from it. With Receipt Preview off (and **Enable Receipt Printing** on), the receipt is sent straight to the printer through QZ Tray. QZ Tray must be installed and running on the computer connected to the printer. On the receipt page, the button **Print with QZ Tray** sends the receipt straight to the printer too, and **PRINT** opens the browser's print window.

4.5 Sales Returns

PATH Sales › Sales Returns

Use this whenever a customer returns something — because of a defect, a change of mind or another reason.

1. Go to **Sales** → **Sales Returns** and click **New Return** (or use **Sales Return** on the sale in Sales History).
2. Look up the invoice by its number.
3. For each product being returned, enter the **Return Qty** (it cannot be more than what was sold), the **Condition** of the goods and whether to **Restock** them.
4. Choose the **Refund Method** and give a **Reason**, then click **Save**. The return is saved as pending.
5. A user with the right permission opens the return and clicks **Approve** (or **Reject**).

> **NOTE** Stock for the returned goods is added back, and the refund or the customer's balance is updated, when the return is approved. Goods that are damaged should not be marked to restock.

4.6 Debits

PATH Sales › Debits

Every customer with an outstanding balance from credit sales, with due dates and overdue status.

1. Go to **Sales** → **Debits**.
2. Click **View** to see the invoice and its **Payments**.
3. Click **Record Payment** when the customer pays (in full or in part). Enter the amount and the payment method and save.
4. To remind the customer, click **Send Reminder**. A ready-made **Message** opens (friendly, or an overdue notice if the due date has passed). Edit it if you wish and click **Send**.
5. Click **Mark Overdue** at the top to flag every debt that has passed its due date.

> **NOTE** The reminder goes out as an SMS through your business's SMS service — see Chapter 8.

4.7 Customers

PATH Sales › Customers

1. Go to **Sales** → **Customers**.
2. Click **New Customer**.
3. Fill in the customer's name, phone number, email and address as your store requires.
4. If the customer may buy on credit, set the **Credit Limit** and **Credit Due Days**.
5. Click **Save**.

> **NOTE** Use **Walk-in Customer** for cash sales where you do not need to register the customer's details. The customer list also shows each customer's **Current Balance**.

CHAPTER 5

5 Purchases

The Purchases section covers the whole buying cycle with your suppliers: ordering, receiving goods, checking invoices and paying. It is under the **Purchases** menu.

5.1 Suppliers

PATH Purchases › Suppliers

1. Go to **Purchases** → **Suppliers**.
2. Click **New Supplier**.
3. Fill in the **Supplier Name**, **Contact Person**, **Phone**, **Email**, address, **City** and **Country**.
4. Enter the **Payment Terms** and the **TIN Number** / **VAT Number** if they apply.
5. Click **Save**.

5.2 Purchase Orders

PATH Purchases › Purchase Orders › New Purchase Order

PERMISSION `view_purchase_orders / create_purchase_orders`

A purchase order (PO) is a formal request to a supplier for goods, made before they are received. The page for a new order is a full page, like an invoice, so the supplier, items, costs and totals stay in view while you work.

1. Go to **Purchases** → **Purchase Orders** and click **New Purchase Order**.
2. Select the **Supplier**.
3. Add the products, with the **Quantity** and **Unit Price** (and **Discount** and **Tax** where used). On a phone each item is a card.
4. Enter the **Expected delivery** date, the **Payment Terms** and the **Delivery address** if needed, and any **Notes**.
5. Click **Save**. The order is saved as pending approval and can still be edited until it is approved.
6. A user with the right permission opens the order and clicks **Approve** (or **Reject**, giving a **Reason**).
7. When the goods arrive, click **Receive goods** on the approved order (section 5.3).

NOTE An order moves through the statuses pending approval, approved, partially received, received or cancelled. The order list shows what is already **Received** and still **Pending** for each item.

5.3 Receiving Goods — GRN (Goods Received Note)

PATH Purchases › Goods Received

The GRN records the goods that really arrived and adds them to your stock. If your store requires inspection, the stock is added only after the goods are inspected and approved.

1. Go to **Purchases** → **Goods Received** and click **Receive goods** (or click **Receive goods** on the purchase order).
2. Select the **Purchase Order**. Its products are filled in.

3. For each product, enter the quantity **Received** (it may differ from what was ordered and cannot be more than is still **Pending**).
4. If you use batches, fill in the **Batch number**, the **Manufactured Date** and the **Expiry Date**. Check the **Unit cost** and, where it is asked for, the **Selling Price**.
5. Add the supplier's delivery note and invoice numbers if you have them, then click **Save**.
6. If inspection is required, the GRN waits as pending inspection. A user with the right permission clicks **Inspect**, enters how many units were **Accepted** and how many **Rejected** (with a **Rejection Reason**) and confirms. The accepted quantity is then added to stock. If inspection is not required, the stock is added as soon as you save.

WARNING Accepted plus rejected cannot be more than the quantity received, and the quantity received cannot be more than what is still pending on the purchase order.

5.4 Supplier Invoices

PATH Purchases › Supplier Invoices

After receiving goods, record the supplier's invoice to show what you owe.

1. Go to **Purchases** → **Supplier Invoices** and click **New invoice**.
2. Select the **GRN** to fill in the items and amounts.
3. Enter the supplier's invoice number (**Supplier Inv. No.**), the **Invoice Date** and the **Due Date**, and any **Shipping Cost** or **Other Charges**.
4. Click **Save**. A user with the right permission can **Approve** the invoice.
5. To pay it, click **Record Payment** (section 5.5).

5.5 Supplier Payments

PATH Purchases › Supplier Payments

1. Go to **Purchases** → **Supplier Payments** and click **New payment** (or click **Record Payment** on a supplier invoice).
2. Select the supplier invoice you are paying.
3. Enter the amount and the payment method (for a bank payment also the bank name and account number), and a reference number.
4. Click **Save** — the invoice's **Balance Due** goes down.

NOTE A payment made by mistake can be cancelled with **Cancel payment**; the invoice balance is restored.

5.6 Supplier Returns

PATH Purchases › Supplier Returns

1. Go to **Purchases** → **Supplier Returns** and click **New Return**.
2. Select the **GRN** to return goods from.
3. For each product, enter the **Return Qty** (it cannot be more than what is **Returnable**) and the **Condition**.
4. Give the **Return Reason** and the **Refund Method**, then click **Save**.
5. A user with the right permission clicks **Approve** — the stock and the related supplier invoice are adjusted.

6 CHAPTER 6 Expenses

Use this section to record operating costs that are not part of buying products — for example rent, electricity, fuel, salaries and transport.

6.1 Recording a New Expense

PATH	**Expenses**
PERMISSION	`view_expenses / create_expenses`

1. Go to **Expenses**.
2. Click **Add Expense**.
3. Select the **Category**, or create one with **New Category**.
4. Enter the **Amount**.
5. Select the **Expense Date**.
6. Select the **Payment Method** used.
7. Add a **Description** and a **Reference Number** (receipt or invoice) if you have one.
8. Click **Save**.

> **NOTE** Use **View**, **Edit** or **Delete** on a row to look at, change or remove an expense. You can filter the list by category and by the dates **From** and **To**; the **Total** of the list is shown.

To see your expenses by category for any period, use the Net Profit Report (section 7.4). Payments made to suppliers are listed under Expenses Reports (section 7.6).

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 7

7 Reports

The Reports section shows how your business is performing — sales, profit, purchases, inventory and expenses — for any period you choose.

> **NOTE** Every report can be exported as PDF, Excel or CSV, or printed, from the export button above the report table. Reports are open to the roles that have the matching permission.

7.1 How Every Report Works

Every report page works the same way:

1. Click the name of the report you want in the row of report names at the top of the page.
2. Choose the period with **Start Date** and **End Date**, or use a shortcut: **Today**, **Yesterday**, **This week**, **This Month**, **Last Month** or **This Year**. Some reports also have filters such as category, product or sale type.
3. The summary cards above the table show the main totals.
4. A chart appears above the table for many reports: trend and comparison reports draw a line chart, and reports that rank things (by product, cashier, customer, category, payment method, supplier, fast moving, dead stock, profit reports) draw a bar chart of the ten biggest rows.
5. The table shows the columns of that report in a fixed order. Use the search box to find rows. A **Total** row under the table adds up the money and quantity columns, for all rows of the report and not only the page you see.
6. Use the export button to download a PDF, an Excel file or a CSV file, or to print. The same Total row, and the period, are included.

> **NOTE** On a phone the table shows each row as a card and the summary cards show the totals. If you have the AI permission, the button above the report can explain the figures in plain words.

7.2 Sales Reports

PATH Reports › Sales Reports

- **Sales Summary Report** — invoice-level overview of total sales.
- **Sales Detailed Report** — line-item detail for every product sold.
- **Sales Returns Report** — products returned and their value.
- **Sales Comparison Report** — day-by-day sales performance (line chart).
- **Sales by Product Report** — best-selling products by revenue.
- **Sales by Cashier Report** — performance of each cashier.
- **Sales by Customer Report** — sales per customer, with the debt balance.
- **Sales by Category Report** — revenue and quantity per category.
- **Sales by Payment Method Report** — totals by payment method.
- **Debits (Outstanding) Report** — credit sales with a balance still unpaid.

7.3 Purchase Reports

PATH Reports › Purchases Reports

- **Purchases summary** — overview of purchase orders.
- **Purchase Detailed Report** — every item ordered.
- **Purchases by Product Report** — what you buy most.
- **Purchases by Supplier Report** — what you buy from each supplier.
- **Purchase trends** — how your buying changes over time (line chart).
- **GRN Report** — goods received notes and their status.
- **Purchase invoices** — payment status and balance of each invoice.
- **Supplier payables** — what you still owe each supplier.
- **Supplier Performance** — fulfilment rates and delivery times.
- **Cost Analysis** — the cost of orders (tax, shipping and so on).
- **Stock replenishment** — products below their minimum and the estimated cost to reorder.
- **Purchase returns** — goods returned to suppliers.

7.4 Profit Reports and the Net Profit Report

PATH Reports › Profit Reports

- **Profit Summary Report** — profit per invoice.
- **Profit Detailed Report** — cost against selling price for every product.
- **Profit by Product Report** — which products earn most.
- **Profit by Category Report** — profit per category.
- **Profit by Cashier Report** — profit per cashier.
- **Profit by Customer Report** — profit per customer.
- **Profit Margins Report** — products ranked by profit margin.
- **Profit Trends Report** — profit over time (daily, weekly, monthly or yearly).

PATH Reports › Net Profit Report

The Net Profit Report shows what your business really earned after all costs: Total Income, Gross Profit (before expenses), Total Expenses and Net Profit, with the expenses broken down by category. In short: Net Profit = Total Income − Total Expenses.

7.5 Inventory Reports

PATH Reports › Inventory Reports

- **Current Stock** — every product and its quantity now.
- **Stock summary report** — stock and its value per product.
- **Current Stock Summary Report** — current stock in short form.
- **Current Stock Detailed Report** — current stock batch by batch.
- **Product Ledger Report** — complete movement history per product.
- **Incoming Stock Report** — stock that came in.
- **Outgoing Stock Report** — stock that went out.

- **Fast Moving Products Report** — products that sell quickly.
- **Dead Stock Report** — products that do not move.
- **Stock below alert level** — products under their alert quantity.
- **Out of Stock Report** — products that have run out.
- **Stock Adjustments Report** — adjustment records.
- **Stock Transfers Report** — transfers between stores.

7.6 Expenses Reports

PATH Reports › Expenses Reports

Payments made to suppliers over any period (payment number, supplier, amount and date). To see your operating expenses (rent, electricity and so on) by category, use the Net Profit Report.

7.7 Day Report

PATH Reports › Day Report

The Day Report is the sales sheet of one day: the totals, a payment method breakdown and every sale of the day with its discount, amount, cost and profit. The list ends with a Total row for discount, amount and profit. Pick the date at the top (or click **Today**). It is ideal for closing the day or handing over a shift. You can also open it from the **Quick Actions** on the Dashboard.

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 8

8 SMS Messaging

The Messaging section lets you send SMS to your customers and contacts from BizTrack — payment reminders, offers, announcements — and keep track of everything you sent. It is under the **Messaging** menu.

> **NOTE** SMS needs an SMS service to be set up for your business first (under Settings → Integration — see section 11.10 — or by the BizTrack team). If you see that SMS is not set up yet, ask your administrator or contact support.

8.1 Sending a Message

PATH Messaging › Recently Sent › Send Message

PERMISSION `manage_messaging`

1. Go to **Messaging** and click the send-message button.
2. Choose the recipients: Individual number(s) (type phone numbers separated by commas, for example 255712345678) or a Group / Subgroup (tick the option to include sub-groups).
3. Optionally choose a template.
4. Type your message. The counter shows the number of characters and how many SMS parts it will use — a message longer than one part uses more than one SMS of your balance.
5. Click **Send**.

8.2 Recently Sent

PATH Messaging › Recently Sent

Lists the messages you sent with their status (sent, partial or failed). Open a message to see its details: date, who sent it, the group, the message and the list of recipients with the result for each.

8.3 All Contacts

PATH Messaging › All Contacts

Your phone book for messaging.

1. Click the button to add a contact.
2. Enter the contact name (optional) and the phone number (required, for example 255712345678).
3. Optionally tick the groups the contact should belong to, then save.

You can edit a contact, change its groups or delete it from the same list.

8.4 Groups

PATH Messaging › Groups

Groups let you send one message to many people at once — for example Wholesale customers or Staff.

1. Click the button to create a group and enter its name.

2. To make a sub-group, enter its name, choose the parent group and create it. A sub-group cannot have its own sub-groups.
3. Click a group to open it. There you can add existing contacts or a new contact, remove a contact from the group (the contact itself is not deleted) and send a bulk SMS to the group.

8.5 Templates

PATH	Messaging › Templates

Templates are messages you send often (for example a payment reminder), saved so you can reuse them in one click.

1. Click the button to create a template.
2. Enter the template name and the message text, then save.
3. When sending a message, pick the template and the text is filled in for you.

8.6 Account & Top-up (SMS Balance)

PATH	Messaging › Account & Top-up
PERMISSION	`view_messaging / manage_messaging_account`

This page shows your SMS balance and the totals of messages sent, and lets you add SMS credit. It shows only the options that work for your business:

- SMS Balance — the number of SMS you have left (not an amount of money). Use the refresh button to read it again.
- Paying directly — if your SMS service supports online payment, you see payment cards: top up by USSD push (enter the amount and your phone number, send the push and approve it on your phone) and pay through a mobile-money request.
- Requesting a top-up — if your SMS service is topped up by the BizTrack team, you see a request form. Optionally enter the amount and a note and send it. Our support team receives your details and contacts you.

NOTE Message totals on this page are counted from the messages sent through BizTrack.

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 9

9 Users, Roles & Permissions

BizTrack lets you add your staff as users and control exactly what each one can see or do through roles and permissions. This is under the **Users** menu (visible to owners and managers).

9.1 Adding a New User

PATH	Users › Users › Add User
PERMISSION	`view_users / Owner or Manager`

1. Go to **Users** → **Users**.
2. Click **Add User**.
3. Fill in the **Full Name** and the **Email**.
4. Set an initial **Password** (minimum 8 characters; the user can change it later).
5. Select the **Role**.
6. Choose the **Account Status**: **Enabled** or **Disabled**, and the **Default Language** if you wish.
7. Click **Create**.

> **NOTE** The new user logs in with that email and password. People who register themselves with the Store Code (section 1.3) appear in the list with a disabled account and no role. Open them with **Edit**, choose their **Role** and set the account to **Enabled** to give them access.

9.2 Roles

PATH	Users › Roles

A role is a group of permissions that defines what a user can do — for example a Sales Cashier role may only create invoices, while a Manager role can see all reports and manage staff.

1. Go to **Users** → **Roles**.
2. Click **New Role**.
3. Enter the **Role Name** and a **Description**.
4. Click **Create**, then open **Permissions** to choose what the role may do (section 9.3).

9.3 Permissions

PATH	Users › Permissions

Every feature in the system has its own permission (for example view_products, create_invoice, view_sales_reports). This is where you decide what each role can do.

1. Go to **Users** → **Permissions**.
2. Choose the role with **Select Role**.
3. Scroll through the permissions, grouped by area (Sales, Purchases, Inventory, Reports and so on), and tick or untick each one. Use the search box to find one.
4. **Check All** enables every permission for the role and **Deny all** removes them all.

WARNING A change to a role applies to everyone who has that role. Give permissions for users and settings only to trusted people (usually the owner or manager).

NOTE If you can see the permissions but cannot change them, your role has view-only access.

9.4 My Profile

PATH **Profile menu › My Profile**

Every user can edit their own profile without any special permission.

1. Click your picture or name at the top of the screen and choose **Profile**.
2. Click **Edit Profile** to change your **Full Name**, **Email**, **Phone** and **Preferred Language** (the language BizTrack shows you — English or Swahili), then **Save Changes**.
3. Use **Upload avatar** to set a picture, or **Remove avatar** to delete it.
4. To change your password, click **Change Password**, enter your **Current Password**, then your **New Password** (minimum 8 characters) and confirm it, then click **Save Password**.

NOTE Your Preferred Language also decides which language of the User Manual is offered first (Chapter 14). If your password has expired, BizTrack asks you to change it before you continue.

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 10

10 Multi-Store

If your business has more than one store (branch), BizTrack lets you manage them under one account — each store keeps its own stock, sales and staff.

> **NOTE** This feature must be enabled in Settings (Multi-Store Support).

10.1 Adding a New Store

PATH Stores › New Store

PERMISSION `view_stores / create_stores`

1. Go to **Stores**.
2. Click **New Store**.
3. Enter the **Store Name**, the **Store Code** (a short code that identifies the store — people use it to register, section 1.3) and the **Location**.
4. Click **Create**.

10.2 Editing or Deleting a Store

1. Go to **Stores**.
2. Use **Edit** on the store row to change its name, code or location.
3. To delete a store, use **Delete** on its row and enter your password to confirm. All the data of that store is lost for good.

> **WARNING** Deleting a store is permanent. Export or back up the data you need before you delete it.

10.3 Switching Between Stores

Use the store selector at the top of the page to change the store you work in (section 1.7).

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 11

11 System Settings

The Settings section controls how the system behaves for your store — from business information, currency and tax to security and backups. It is under the **Settings** menu and is normally open only to the owner or manager.

11.1 Business Information

PATH Settings › Configurations › Business Information

The core business details that appear on receipts and invoices:

- Business Name
- TIN Number and VRN Number
- Business Address, Phone and Email
- Website
- Receipt Footer Text (for example Thank you for your business!)

NOTE Upload your logo and receipt header image under Settings → Uploads (section 11.4). After changing anything on the Configurations page, click the save button at the bottom.

11.2 System Defaults

PATH Settings › Configurations › System Defaults

How the system behaves by default for your store:

- Default Language (Swahili / English)
- Default Currency and Currency Position (before or after the amount)
- Number of Decimal Places (0 to 4)
- Default Tax Rate (VAT %, from 0 to 100)
- Default Payment Method (Cash, Mobile Money, Bank Transfer)
- Default Discount Type (Amount or Percentage) and Default Discount Mode (Per Unit or Volume)
- Default Customer Type (Walk-in or Registered)
- Default Credit Due Days (1 to 90)
- Default Receipt Size (58mm, 80mm, A5, A4)
- Default Report Date Range
- Date Format and Time Format (12 or 24 hours)

11.3 Operations Settings

PATH Settings › Configurations › Operations Settings

These switches turn features on or off to suit your business:

Feature	What it does
Multi-Store Support	Allows adding and managing more than one store.
Multi-Language Support	Lets users switch the language of the interface.
Support Credit Sales	Allows selling on credit and tracking debts.
Support Multiple Payment Methods	Allows one invoice to be paid by more than one method.
Allow Discount	Enables discounts on sales.
Allow VAT	Shows and calculates VAT on invoices.
Multi-Price Support	Enables price categories (retail, wholesale).
Show Currency	Shows the currency next to prices and totals.
Make Price Fixed	Stops the price being changed during a sale.
Use Batch-wise Price	The price depends on the batch of goods received.
Allow Record Sales for Past Dates	Allows a sale to be recorded with an earlier date.
Allow Record Purchases for Past Dates	Allows a purchase to be recorded with an earlier date.
Enable Receipt Printing	Turns on printing a receipt after a sale.
Receipt Preview	Shows the receipt first; when it is off, the receipt is sent straight to the printer through QZ Tray.
Show Logo on Receipt	The business logo appears at the top of the receipt.
Enable Expire Date	Allows an expiry date on a product batch.
Allow Negative Stock	Allows selling even when stock has reached zero.
Show Paid/Change on Receipt	The customer's change appears on the printed receipt.
Require Full Customer Registration	A sale needs full customer details before it can be completed.
Use Customer Credit Limit	Credit sales are blocked once a customer reaches their credit limit.
Show Time On Dates	Receipts and reports show the time together with the date.
Show Unit on Stock	The unit (kg, pc...) is shown next to the quantity.
Allow Inter-Store Transfer	Enables moving stock between stores.

NOTE After changing settings, click the save button for them to take effect.

11.4 Uploads

PATH **Settings › Uploads**

Upload the images that brand your business: the company logo, the receipt header image (wide, for example 800×200 px) and the favicon. Use **Upload** for a new image, **Replace** to change it and **Remove** to delete it. Images can be up to 5 MB.

11.5 Bulk Operations

PATH Settings › Bulk Operations

The same bulk import and export of products, prices and stock by Excel or CSV described in section 3.6, kept here for the administrator's convenience.

11.6 Security

PATH Settings › Security

The **Security Center** shows your store's security status and its main controls:

- **Session Timeout (minutes)** — the session locks after this much inactivity; the user unlocks it with their password (section 1.8).
- **Max Login Attempts** — an account is locked after this many failed logins in a row, for the **Account lock time**.
- **Password Expiry (days)** — asks users to change their password regularly. Set 0 to switch it off.
- Security Controls — switches for core security features such as audit logging.

1. Go to **Settings** → **Security**.
2. Adjust the controls you need.
3. Click **Save Security**.

NOTE Apart from these settings, BizTrack pauses sign-in for a few minutes after 10 wrong passwords for the same email within 15 minutes (section 1.2). Your administrator can change those limits on the server.

11.7 Tools

PATH Settings › Tools

- **Export Data** — click **Backup this store** to download an SQL backup of this store's data for safekeeping.
- **Connection** — click **Run Health Check** to confirm that the database answers; you see the status, the response time and how many tables were checked.
- **Clear Cache** — use this if the system shows old data or seems stuck; nothing is lost.
- **Activity Logs** — press **Filter** to load the record of what users did. You can filter by action, user and dates, and open an entry to see who did it and when.

NOTE Automatic backups and restoring a backup are handled by the BizTrack team (or by the Google Drive backup in section 11.10) — contact support if you need to restore data.

11.8 Notifications

PATH Settings › Notifications

Choose which events notify you, and how: in the app (in real time, shown under the bell), by email or by SMS.

- Low Stock Alert — when a product reaches its alert quantity.
- New Sale — whenever a sale is completed.
- Payment Due — when customer payments become overdue.
- Purchase Received — when goods are received.

- Stock Transfer — when stock is transferred between stores.
- Sales Returns and Stock Adjustments — when they are created or approved.
- New User Registrations — people waiting for access.
- Security Activity — important account and password activity.

Use **Run Now** to run the scheduled checks straight away. The daily summary at the end of the day goes to the store owner by email and as a short SMS.

> **NOTE** The bell at the top of the page lists your notifications; use **Mark all as read** or **Clear** to tidy it.

11.9 Appearance

PATH **Settings › Appearance**

Choose the **Color scheme** — a light or a dark page surface — and your accent colour, then click **Apply**. **Reset to default** goes back to the original look. These preferences are saved on your own device; other users choose their own.

11.10 Integration

PATH **Settings › Integrations**

Connect BizTrack to outside services. This page is for the person who administers your business.

- **Email (cPanel)** — send BizTrack email through a mailbox on your own hosting: enter the SMTP host, port, user name and password, the from-address and name, then click **Test Connection** and **Send test email**, and activate it. A business sender is used for messages you send; a system sender is used for password reset and other system emails.
- **SMS Integrations** — choose the SMS gateway, enter its settings and sender IDs, test the connection and save. Account & top-up is described in section 8.6.
- **Google Drive Backup** — enter the Google credentials, choose the daily backup time and how long backups are kept, and use **Run backup now** when you want one immediately. The history of backups is listed below.

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 12

12 Subscription & Billing

PATH Subscription

This section shows your BizTrack subscription — its plan, expiry date and your payment history.

12.1 Checking Your Subscription Status

The page shows the **Current plan** with its status and expiry date and, if the store has no active subscription, says so. The plans show how many users and stores each one allows (the number of users and stores each plan allows). Use **Check Status** to refresh after a payment.

12.2 Making a Subscription Payment

Only the account owner can pay for the subscription.

1. Go to **Subscription**.
2. Under **Choose a plan**, select the plan you want.
3. Enter the number of **Months to pay** (1 to 24). The longer you pay for, the bigger the discount: from 6 months there is a discount, and the page shows how much you save and the **Amount to Pay**.
4. Enter the **Mobile money phone number** you will pay from, and your name and email.
5. Click **Pay Now** and confirm the payment request that arrives on your phone.

> **NOTE** Payments are accepted through mobile money (currently Airtel Money, Mixx by Yas and HaloPesa). If the payment does not complete, the page tells you; use **Check Status** after you approve it on your phone.

Below you find the **Payment History**: date, plan, billing cycle, months paid, discount, amount, status and a **Receipt** you can download as a PDF.

BizTrack
TRACK • GROW • SUCCEED

13 CHAPTER 13 BizTrack AI

PATH	BizTrack AI
PERMISSION	`ai_access`

BizTrack AI is an assistant you can ask about your business in plain language. It answers from your store's real data (sales, profit, products, customers, expenses), not from guesses.

13.1 How to Use BizTrack AI

1. Go to **BizTrack AI** in the main menu.
2. Type your question, for example How are today's sales performing?, Which products are leading today? or Why is my profit down?
3. Send it and wait for the answer — you also see the sources used to build it.
4. Start a new conversation at any time to ask about something else.

> **NOTE** The Dashboard also shows AI cards with a short summary of how your business did, and an AI question box that opens BizTrack AI. In the reports, the explain button describes the figures in plain words (if your role has that permission).

BizTrack
TRACK • GROW • SUCCEED

CHAPTER 14

14 Help, Support & User Manual

14.1 Downloading the User Manual

PATH User Guide (main menu)

This manual is inside BizTrack, in English and Swahili.

1. Click **User Guide** in the main menu.
2. The manual in your own language (your Preferred Language) is shown first — click **Download PDF** to save it, or **Open in browser** to read it on screen.
3. The manual in the other language is offered next to it. The PDF is easy to read on a phone and can be shared or printed.
4. Below the manuals, the notes under What changed in this update describe the newest changes.

14.2 Submitting a New Ticket

PATH Help & support

If you have a problem or need help, send a ticket.

1. Click the help icon at the top of any page (or **Help & support** in the menu).
2. On the new ticket tab, choose the **Category**.
3. Write the **Subject** and describe the problem in the **Message**: what happened, what you expected and the steps that led to it.
4. Click **Send**.

NOTE You get a ticket number, and a confirmation is sent to your email. Keep the number to follow the ticket.

14.3 Tracking Your Ticket

1. Open **Help & support**.
2. Go to the tab **My Tickets** — it lists every ticket you have sent.
3. Open a ticket to read the replies and see its progress.

NOTE The support team answers tickets from its own support desk; accounts that run support see the entry **Support desk** in the menu.

CHAPTER 15

15 General Tips & Troubleshooting

15.1 Tips for Getting the Most out of BizTrack

- Do a Stock Count regularly to catch shrinkage early.
- Set an accurate Alert Quantity for every product so you are warned before it runs out.
- Review Debits regularly and send payment reminders before the due date.
- Make sure you work in the correct store before you start selling or buying (for businesses with several stores).
- Download a backup regularly (Settings → Tools) and ask support about automatic backups.
- Give administrative permissions (Users, Settings, Security) only to trusted people.
- Use the Profit Reports and the Net Profit Report every month to see which products and costs matter most.
- Close each day with the Day Report.
- Save the messages you send often as Templates, and keep your customers in Groups so one click reaches everyone.
- On a phone, install BizTrack as an app (section 1.9) for faster opening.

BizTrack
TRACK • GROW • SUCCEED

15.2 Common Troubleshooting

Problem	Solution
I cannot see a menu item	Ask your store administrator — your role may not have permission for that section (Users → Permissions).
I forgot my password	Click Forgot password? on the login page (section 1.4).
Sign-in says to wait a few minutes	There were 10 wrong passwords for that email in 15 minutes. Wait the time shown, or use Forgot password? (section 1.2).
The screen says Session Locked	You were inactive for a while. Enter your password and click Unlock (section 1.8).
A page shows Something went wrong	Click Try again; if it comes back, click Reload. Anything already saved is safe. If it keeps happening on the same page, send a ticket saying which page it was (section 14.2).
A message says A new version is available	BizTrack was updated while the page was open. Click Reload.
The system shows old data	Go to Settings → Tools → Clear Cache, then reload the page.
I cannot sell a product — stock is empty	Receive the goods with a GRN, or add the quantity with a Stock Adjustment.
The price does not look right	Check the Price Categories and the Price List — the product may be using another price category.
A customer or product does not show when I search	Type part of the name or phone number — the search covers all records. If it still does not appear, check the spelling or whether the item is inactive.
The receipt does not print straight away	Check that Enable Receipt Printing is on and that QZ Tray is running on the computer connected to the printer. Use Print on the receipt page to print with the browser instead.
SMS says it is not set up yet	The SMS service for your business must be set up (Settings → Integration, or by the BizTrack team) — see Chapter 14.
I need more SMS credit	Open Messaging → Account & Top-up. Pay directly if you see payment cards, or send a top-up request (section 8.6).
I ran into an error I do not understand	Send a ticket describing exactly what happened (Chapter 14).

CHAPTER 16

16 What's New in BizTrack Version 2

This chapter lists, at a glance, what is new in BizTrack Version 2 (November 2026). Each change is also explained in the chapter where it belongs.

16.1 Faster opening

BizTrack now opens with a lighter first download. The tools that make PDF and Excel files are loaded only the first time you export, print a document or download a receipt, so the first screen appears sooner, especially on a phone or a slow connection. The first export after you open BizTrack may take a moment longer; after that it is as fast as before.

16.2 Reports: columns, totals and charts

Every report under the Reports menu now shows its columns in the usual order, with the usual headings, and a Total row.

- **Total row.** Money and quantity columns that make sense to add up (for example Total Amount, Amount Paid and Amount Due in the Sales Summary) are totalled in a bold row under the table. The total covers every row of the report, not only the page you are looking at.
- **Exports.** The same Total row is included in PDF, Excel and CSV exports, and in Print. The period (From / To dates) is printed in the header.
- **Charts.** Trend and comparison reports (Sales Comparison, Purchase Trends, Profit Trends) draw a line chart above the table. Reports that rank things — By Product, By Cashier, By Customer, By Category, By Payment Method, Supplier Payable, Fast Moving, Dead Stock and the profit reports — draw a bar chart of the ten biggest rows.
- **Day Report.** The list of the day's sales ends with a Total row for Discount, Amount and Profit.

> **NOTE** The summary cards above each report, the filters, the date shortcuts (Today, This Week, This Month…) and the search box work as before. The Total row appears on the desktop table; on a phone the summary cards show the totals.

16.3 Printing receipts with QZ Tray

QZ Tray lets BizTrack send a receipt straight to the printer without the browser's print window. It is now available everywhere a receipt can be printed:

Where	What happens
Sales → Invoice	After a sale, if Enable Receipt Printing is on and Receipt Preview is off (Settings → Configurations), the receipt prints at once.
Sales → Pending Orders → open an order → Sell	Same rule: with Receipt Preview off the receipt prints at once and you return to Pending Orders. With Receipt Preview on, the receipt page opens.
Sales → Sales History → Receipt	With Receipt Preview off, the receipt is reprinted at once. With it on, the receipt page opens.

Where	What happens
The Receipt page	A new button, Print with QZ Tray, sits next to Print. It prints the receipt in the size you chose in the list above it. The Print button still opens the browser print window.

Before you print this way: QZ Tray must be installed and running on the computer that is connected to the printer, and the person who hosts BizTrack must have set up the QZ Tray key on the server.

> **WARNING** If QZ Tray is not running, BizTrack shows “Failed to print. Make sure QZ Tray is running.” Start QZ Tray and print again from the Receipt page — the sale itself is already saved and is not affected.

16.4 The Dashboard for roles without full figures

If your role does not include the dashboard figures or the sales reports, the Dashboard no longer looks empty. It shows a short notice, today’s date and a card for each page your permissions allow, such as Invoice, Sales History, Customers, Products, Current Stock, Purchase Orders, Expenses and Sales Reports. Tap a card to open that page. If no card is shown, ask your store administrator to give your role the permissions you need (Chapter 9).

16.5 If a page shows “Something went wrong”

If one page meets an unexpected problem, BizTrack now shows a card for that page instead of a blank screen. You stay signed in, in the same store and language.

- **Try again** — loads the page again.
- **Reload** — reloads BizTrack. Use this if Try again shows the card again.
- **Back to Dashboard** — goes to the Dashboard. Opening any other page from the menu also clears the card.

Anything already saved is not affected. Text you were typing in that page and had not yet saved may be lost. If the card keeps appearing on the same page, send a ticket (Chapter 14) and say which page it was and what you were doing.

If instead you see **“A new version is available”**, BizTrack was updated while the page was open. Press Reload to continue with the new version.

16.6 Sign-in protection

To protect your account, BizTrack now limits repeated wrong attempts:

- After **10 wrong password attempts** for the same e-mail address within 15 minutes, sign-in pauses. The message tells you how many minutes to wait. Signing in correctly never counts against you.
- Requests for a password-reset e-mail or a new verification e-mail are limited to about 10 per hour for the same address, and the confirm-your-password box on the lock screen allows 10 wrong tries in 15 minutes.
- Other users are not affected: only the e-mail address that was tried is paused.

> **TIP** If you forgot your password, use Forgot Password on the sign-in page instead of guessing — it is faster and keeps your account from pausing. Your administrator can change these limits.

16.7 Quick reference — what is new and where

Feature	Where to find it
Totals and charts in reports	Reports → any report
Day Report totals	Reports → Day Report
Print with QZ Tray button	Sales → Invoice → (after sale) Receipt page; Sales History → Receipt
Receipt Preview / Enable Receipt Printing	Settings → Configurations
Dashboard shortcuts for limited roles	Dashboard
Something-went-wrong card	Any page
Sign-in pause message	Sign-in page
